

The Heart of the Engine's Lubrication System

CTP Oil Pumps

A worn out oil pump will cause a low oil pressure condition leading to serious engine damage, engine bearing failure, piston and liner seizure and critical parts wear and breakdown. CTP oil pumps are manufactured to strict ISO 9001 quality standards. Our engineers have extensive experience in designing engine components that adapt to specific conditions to prevent and cause engine wear. CTP oil pumps are manufactured to ensure unrivaled performance, reliability and longevity.
