

# DAMPERS

Vibration dampers are designed to reduce the torsional & harmonic vibrations originated from the crankshaft as the engine operates. These vibrations cause excessive stress on the crankshaft that can lead to crankshaft breakage. CTP vibration dampers will keep the crankshaft rotating smoothly and vibration free eliminating the risk of engine failure.

### Dampers will help reduce:

- ✓ Premature bearing wear
- ✓ Gear wear
- ✓ Crankshaft wear

Part No.	Description	Engine Model	Application
