

CUSHION MOUNTS FOR KOMATSU®

Engine dampening cushion mounts protect the frame from engine vibration, while cabin mounts isolate operators from the frame to reduce operator fatigue. Like all rubber parts, cushion mounts will wear down with time and use. Rubber mounts are robust and usually last 5-7 years before they wear off. However, checking them regularly during services, including routine oil changes, is good practice. CTP Komatsu® cushion mounts are designed to improve operator comfort and reduce frame and operator fatigue.
